

Project Name: "Circles"

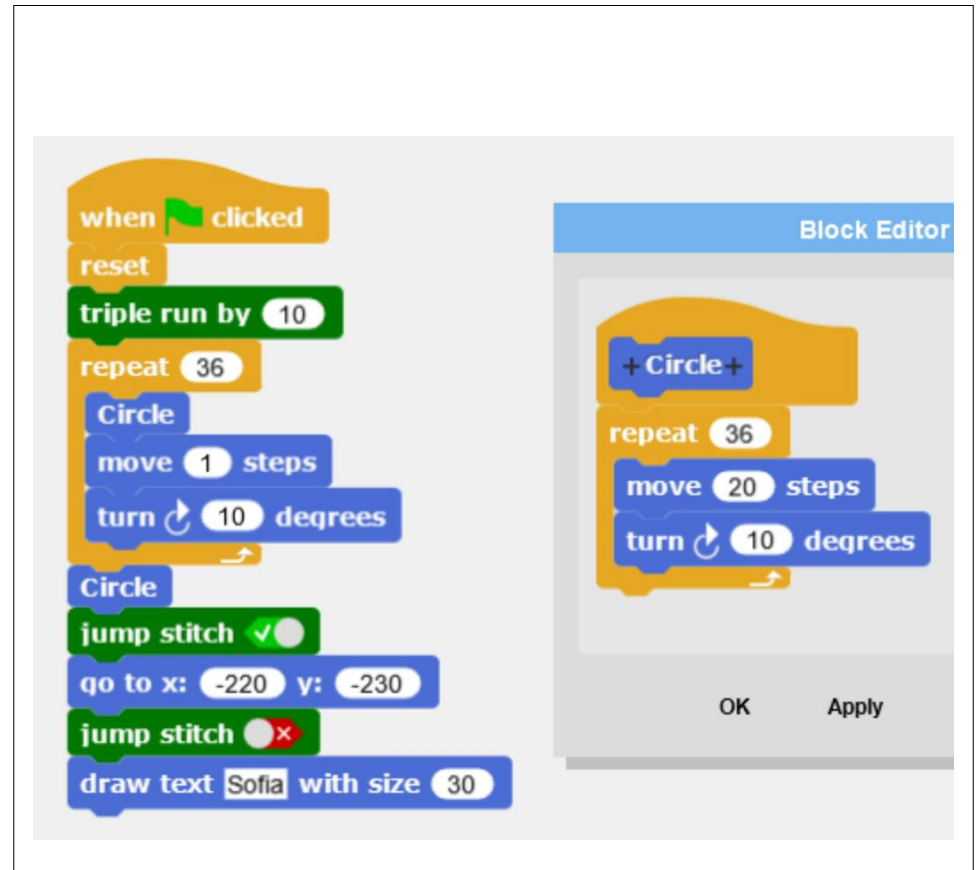

In this beginner's card, we learn how to a stitching pattern consisting of create 36 circles and my name.

What is special about my project?

I loved that everybody could choose a topic and work an own project. Learning something new that will be useful in the future is certainly a good idea too. Nevertheless, it was very hard at first to understand the program.

This is my TurtleStitch code:

Description of your code:

- The program starts when clicking on the flag.
- The stitching pattern I chose is triple run stitch.
- Then, I stitched 36 circles, which all have an offset of 10° and one step.
- Now, I make a jump stitch: The needle goes to a the position $X = -220$ and $y = -230$ without stitching. At the new position, I will stitch my name.
- My name is stitched with triple run stitch in size 30.
